## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Generally a CCD (charge coupled device) is a type of detector used in conjunction with an apparatus. A CCD is not used in the art to directly to detect molecular species. The specification describes the structure of a FET sensor having CCD detection but it is not clearly stated how the molecular recognition layer and electrodes are incorporated into the FET sensor and further where CCD detection occurs in the apparatus.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United

States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Marks, et al. (US 6203758).

Marks, et al. teach a molecular recognition layer over the sensor using molecular imprinting techniques for DNA which measures a substance by change in capacitance having CCD detection (col. 2, l. 39-44; col. 3, l. 38-40; col. 4, l. 43-52; col. 5, l. 3-12; col. 8, l. 25-50; col. 19, l. 11-25; col. 22, l. 49-54; col. 25, l. 30-32, 35; col. 26, l. 1-64).

***Relevant Prior Art***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 5587273 teaches a method of molecularly imprinting materials and various methods and materials that can be used to achieve a molecularly imprinted sensor.
